e. Undistributed securities from underwriting contracts in form of firm commitment

- ▶ Exposures to market risk of these securities are determined as the following formula:

$$\begin{aligned} & \text{Exposures to market risk} \\ & = \{ \text{Quantity of undistributed securities, or distributed but not yet paid} \\ & \times \text{Issuance underwriting price} - \text{Value of collaterals (if any)} \} \times \text{Issuance risk coefficient} \\ & \times \left\{ \text{Market risk coefficient} + \frac{(\text{Issuance underwriting price} - \text{Trading price}) \text{ (if positive)}}{\text{Issuance underwriting price}} \right\} \end{aligned}$$

In case of Initial Public Offering (IPO), including initial equitization auction, bonds auction, trading price is equal to book value per share of issuer at the latest period, or initial price (if unable to determine book value), or par value (in case of bonds).

- ▶ Market risk coefficient is determined in *Note 3.4.1*
- ▶ Issuance risk coefficient is determined based on remaining duration to the ending date of the distribution period according to the contract, but not exceed the allowed distribution period in accordance with legislative regulations, as follows:
 - Until the last day of the distribution period, if the remaining time is more than sixty (60) days: the issuance risk coefficient is 20%;
 - Until the last day of the distribution period, if the remaining time is from thirty (30) to sixty (60) days: the issuance risk coefficient is 40%;
 - Until the last day of the distribution period, if the remaining time is less than thirty (30) days: the issuance risk coefficient is 60%;
 - In the period from the last day of the distribution period to the settlement day: the issuance risk coefficient is 80%;
 - After the last settlement day, the Company has to determine the exposures to market risk of securities that have not been distributed using the formula in *Note 3.4* in accordance with regulations stated in Clause 4 Article 9 - Circular No. 87/2017/TT-BTC;
 - Value of customers' collaterals is determined as follows:

The underlying securities in the above formula shall satisfy the following conditions: being included in the issuance plan or registered with the State Securities Commission on the use of these securities to hedge against the risks of the covered warrants; and being the underlying securities of the covered warrants;

- ▶ In case of loss from covered warrants issued by the Company, the Company shall calculate exposures to market risk of underlying securities from the hedging activities instead of calculate exposures to market risk of the covered warrants;

g. Futures contract

Exposures to market risk of futures contracts are determined by the following formula:

$$\text{Exposures} \\ \text{to market} \\ \text{risk} = \left[\begin{array}{l} \text{Closing} \\ \text{price} \end{array} * \begin{array}{l} \text{Open} \\ \text{volume} \end{array} - \begin{array}{l} \text{Value of} \\ \text{purchased} \\ \text{securities} \end{array} \right] * \text{Market} \\ \text{risk} \\ \text{coefficient} - \text{Escrow} \\ \text{value}$$

The value of purchased securities in the above formula is the value of underlying securities purchased by the Company to cover for future contractual obligations.

Escrow value in the above formula is the value of assets that the Company deposits for trading, dealing and creating a market related to future contracts.
