#### 3.3.2 Asset price (continued)

#### e. Undistributed securities from underwriting contracts in form of firm commitment (continued)

- Value of customers' collaterals is determined as follows:  
Value of collaterals = Volume of assets x Asset price x (1 – Market risk coefficient).

#### f. Covered warrants issued by the Company

- ▶ Exposures to market risk of covered warrants issued by the Company, in case of gain, is determined by the following formula:

$$\text{Exposures to market risk} = \left[ \begin{array}{l} \text{Settlement price of the} \\ \text{underlying securities} \\ \text{at the date} \\ \text{of} \\ \text{calculation} \end{array} \times \begin{array}{l} \text{Quantity of} \\ \text{outstanding} \\ \text{covered} \\ \text{warrants} \\ \text{issued by} \\ \text{the} \\ \text{Company} \end{array} \times \text{Conversion rate} - \begin{array}{l} \text{Price of} \\ \text{underlying} \\ \text{securities in} \\ \text{accordance} \\ \text{with} \\ \text{Appendix II} \\ \text{of Circular} \\ \text{87/2017/TT-} \\ \text{BTC} \end{array} \times \begin{array}{l} \text{Quantity of} \\ \text{underlying} \\ \text{securities} \\ \text{used to} \\ \text{hedge for} \\ \text{the} \\ \text{covered} \\ \text{warrants} \\ \text{issued} \end{array} \right] \times \text{Market risk coefficient} - \text{Escrow value when issuing the covered warrants}$$

The underlying securities in the above formula shall satisfy the following conditions: being included in the issuance plan or registered with the State Securities Commission on the use of these securities to hedge against the risks of the covered warrants; and being the underlying securities of the covered warrants.

- ▶ In case of loss from covered warrants issued by the Company, the Company shall calculate exposures to market risk of underlying securities from the hedging activities instead of calculating exposures to market risk of the covered warrants.
- ▶ The Company also calculates market risk for the difference between the value of the underlying securities used to hedge against the risk of the covered warrants and the value of the underlying securities necessary to hedge for the covered warrants (corresponding to hedging value).

#### g. Futures contract

Exposures to market risk of futures contracts are determined by the following formula:

$$\text{Exposures to market risk} = \left[ \begin{array}{l} \text{Closing price} \\ \times \\ \text{Open volume} \end{array} - \begin{array}{l} \text{Value of} \\ \text{purchased} \\ \text{securities} \end{array} \right] \times \text{Market risk coefficient} - \text{Escrow value}$$

The value of purchased securities in the above formula is the value of underlying securities purchased by the Company to cover for future contractual obligations.

Escrow value in the above formula is the value of assets that the Company deposits for trading, dealing and creating a market related to future contracts.
